USSN: 10/698,348 Group Art Unit: 3736 Docket No. 151P11706US01

## AMENDMENTS TO THE CLAIMS

1. (Previously Presented) A method of using an esophageal catheter having a lumen, comprising the steps of:

determining an esophageal location in a patient having an esophagus, comprising the steps of:

passing a distal end of said catheter through an esophagus and a lower esophageal sphincter into a stomach of a patient;

introducing a flow of gas having a constant pressure to a proximate end of said lumen of said esophageal catheter;

measuring a lumen pressure of said gas in said lumen;

pulling back said distal end of said catheter from said patient;

noting an increase in said lumen pressure;

noting a subsequent decrease in said lumen pressure;

identifying an upper boundary of said lower esophageal sphincter based upon said decrease; and

establishing said esophageal location relative to said upper boundary of said lower esophageal sphincter; and

anchoring a capsule to said esophagus with said catheter.

- 2. (Original) A method as in claim 1 further comprising the step of determining a baseline for said lumen pressure before said pulling back step and wherein said increase in said lumen pressure is relative to said baseline.
- (Original) A method as in claim 2 wherein said distal end of said catheter is removed gradually.

USSN: 10/698,348 Group Art Unit: 3736 Docket No. 151P11706US01

- 4. (Original) A method as in claim 3 wherein said increase is measured as said distal end of said catheter enters said lower esophageal sphincter.
- 6. (Original) A method as in claim 4 wherein said decrease is measured as said distal end of said catheter passes an upper boundary of said lower esophageal sphincter.
  - 6. (Previously Presented) A method as in claim 5 wherein said anchoring step is accomplished by measuring a predetermined distance from said upper boundary of said lower esophageal sphincter.
  - (Previously Presented) A method as in claim 6 wherein said esophageal location is a predetermined distance above said upper boundary of said lower esophageal sphincter.
  - 8. (Original) A method as in claim 1 wherein said pulling back step is accomplished in a series of incremental steps with pauses in between each of said incremental steps and wherein said measuring step is accomplished during said pauses.
  - 9. (Original) A method as in claim 1 wherein said gas comprises air.
  - 10. (Previously Presented) A method of using a catheter having a lumen, comprising the steps of:

determining an esophageal location in a patient having an esophagus, comprising the steps of:

passing a distal end of said catheter through a first chamber and a restriction into a second chamber of a patient;

introducing an air flow having a constant pressure to a proximate end of said lumen;

measuring a lumen pressure in said lumen;

USSN: 10/698.348 Group Art Unit: 3736 Docket No. 151P11706US01

determining a baseline for said lumen pressure;
pulling back said distal end of said catheter from said patient;
noting an increase in said lumen pressure;

noting a subsequent decrease in said lumen pressure;

identifying an upper boundary of said restriction upon said decrease; and establishing said esophageal location relative to said upper boundary of said lower esophageal sphincter; and anchoring a capsule to said esophagus with said catheter.

- 11. (Original) A method as in claim 10 further comprising the step of determining a baseline for said lumen pressure before said pulling back step and wherein said increase in said lumen pressure is relative to said baseline.
- 12. (Original) A method as in claim 11 wherein said distal end of said catheter is removed gradually.
- 13. (Original) A method as in claim 12 wherein said increase is measured as said distal end of said catheter enters said restriction.
- 14. (Original) A method as in claim 13 wherein said decrease is measured as said distal end of said catheter passes an upper boundary of said restriction.
- 15. (Previously Presented) A method as in claim 14 wherein said anchoring step is accomplished by measuring a predetermined distance from said upper boundary of said restriction.
- 16. (Previously Presented) A method as in claim 15 wherein said esophageal location is a predetermined distance above said upper boundary of said restriction.
- 17. (Original) A method as in claim 10 wherein said pulling back step is accomplished in a series of incremental steps with pauses in between each of said

USSN: 10/698,348 Group Art Unic 3736 Docket No. 151P11706US01

incremental steps and wherein said measuring step is accomplished during said pauses.

- 18. (Original) A method as in claim 10 wherein said gas comprises air.
- 19. 28. (Canceled)
